Rendering
Video Editing

Compositing
Masking
Motion Tracking
Rendering

**what blender does to
a mf**

This is all
FOSS?

... but we're FOCUSED on making a
MODEL to put in a GAME later

So many ways to model!

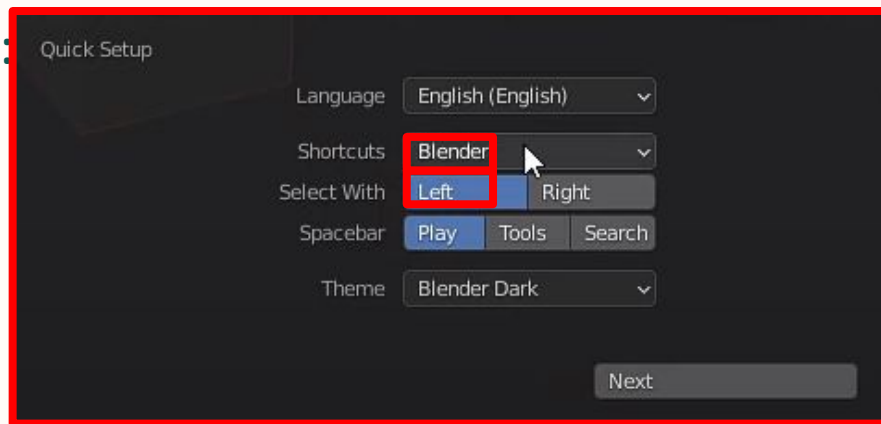

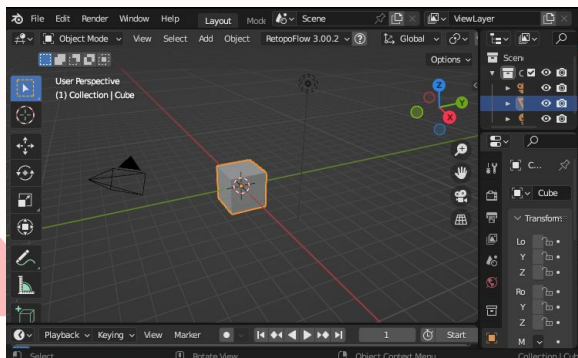

Honorable mention:
Literally just throwing
cubes around.
It's FUN and people LIKE IT.

Getting set up

Let's get Blender and box-model your own dinosaur!

1. Download & install it from <https://www.blender.org/download/>
 - a. (Or get it on Steam!)
2. Launch it
3. Do your quick setup LIKE THIS:
4. Hit next and start a new “General” project

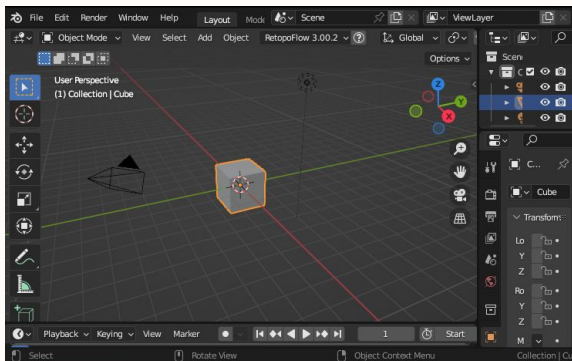

Navigation

Hold the middle mouse button and drag mouse to orbit the view

Hold Shift while doing this to pan instead

Scroll to zoom

1. Look around the cool cube
2. Select it, then delete it
3. Save (Ctrl-S)

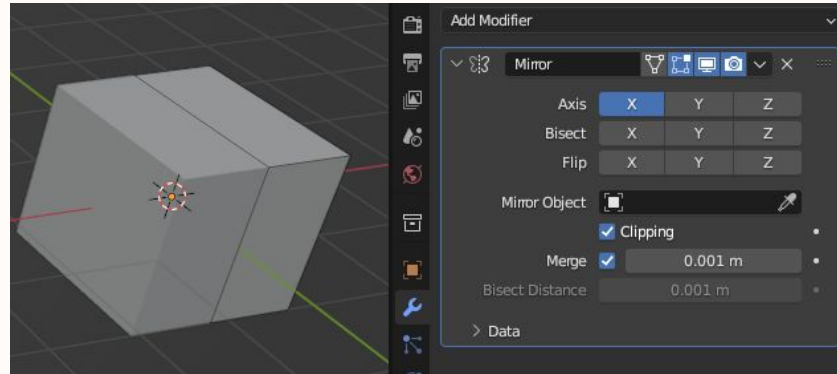

Today's Process

1. Making the mesh
2. UV unwrapping
3. Texturing

1. Making the mesh

Let's get started with symmetry!

1. Cut cube in half
2. Apply the Mirror modifier

Mesh Editing

Start simple

Tab — Toggle Edit Mode / Object Mode

Ctrl-R — Loop cut

E — Extrude

S — Scale

G — Grab

Having a hard time?

No worries, it is kinda daunting at first.
You can modify an existing dino into your own
if you want! Download is in
or at tinyurl.com/yckjc799

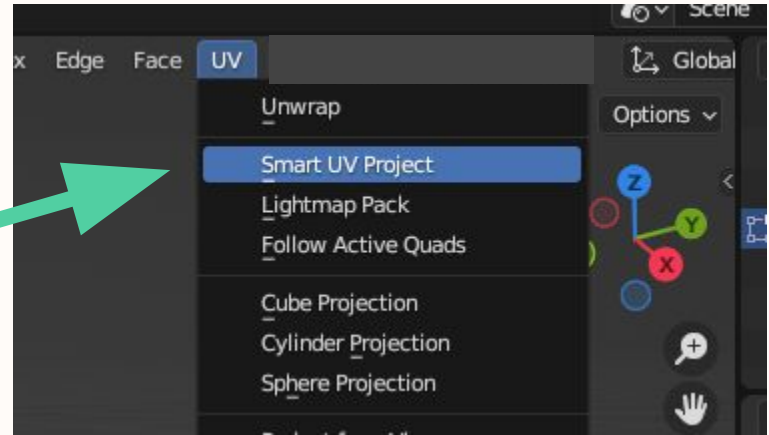

gamedev-chat

2. UV unwrapping

Layout Modeling Sculpting **UV Editing**

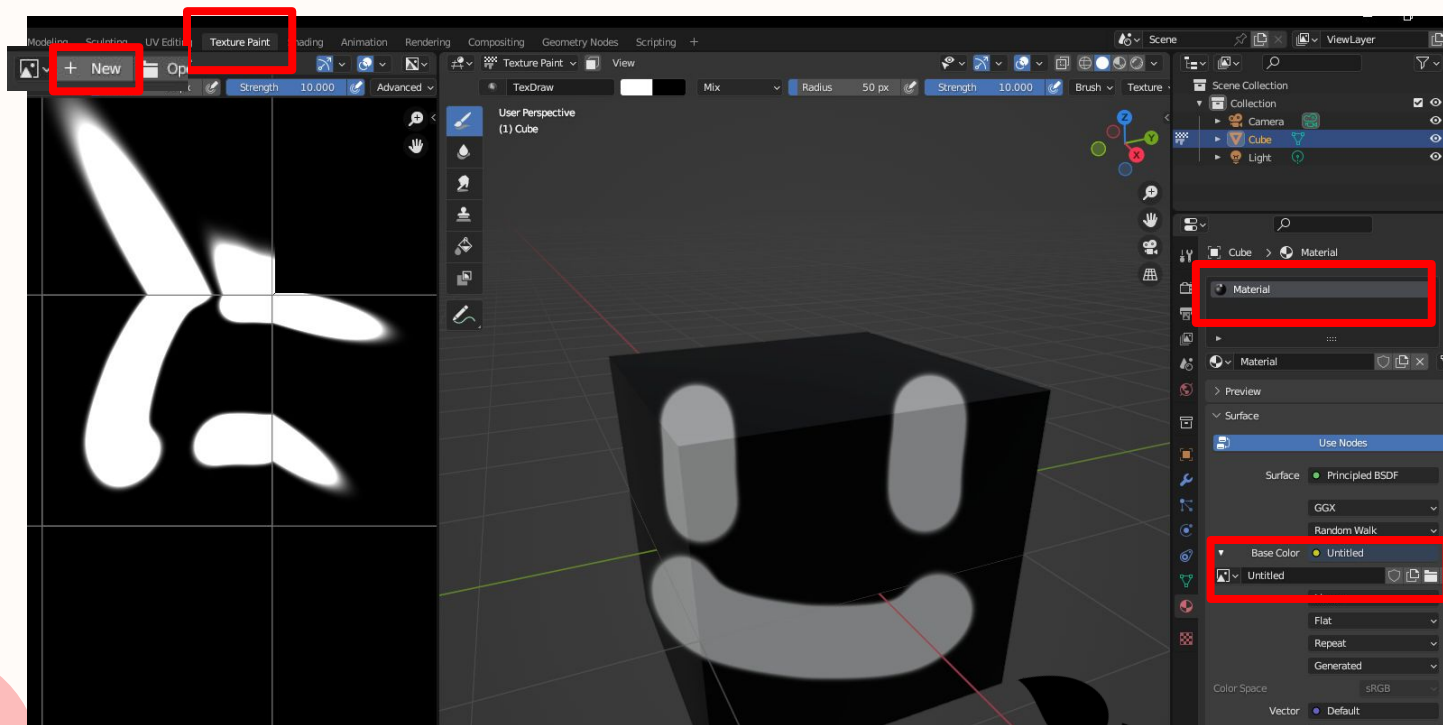

**its actually very
clamped**

3. Texturing

WE COLORING, GRAB THE CRAYONS!

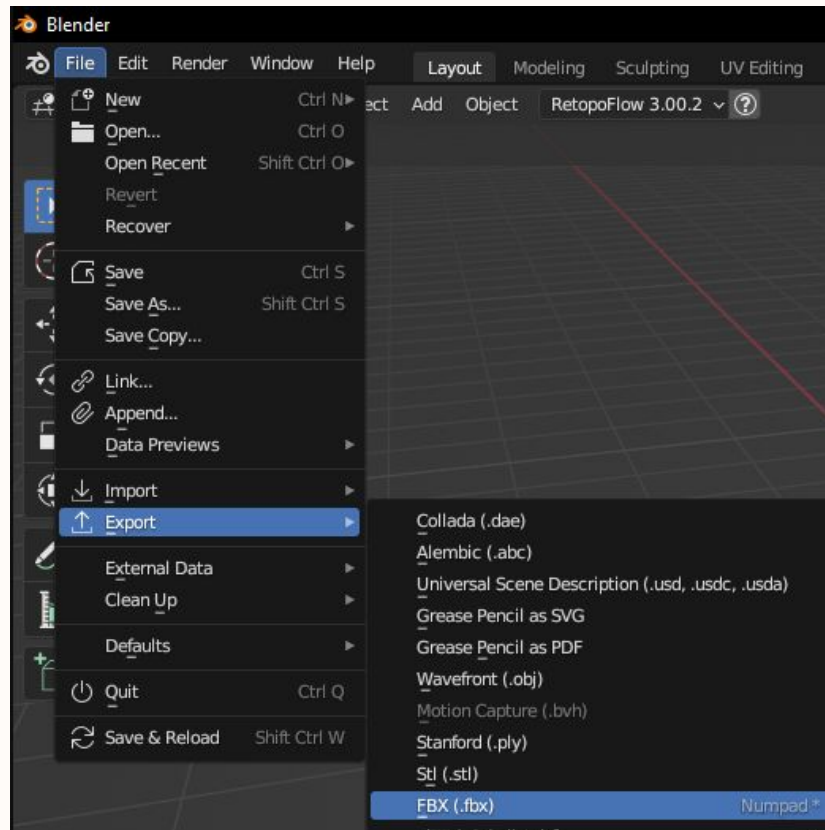

Save Your Texture

Surprise step 4. EXPORT!!

**you've gotta be
squidding me**

Send Your Dino!

Want your dino to be in a dino “group photo”?
Send your model file AND your texture in:

Or you can keep your dino secret :)

Thanks!
